

Software expertise combined with top industry know-how

Color-accurate printing on decorative products can be a challenge — natural materials can vary and production is often complex. ColorGATE provides you with all the tools you'll need to fine-tune your digital data to the constantly changing conditions, and will help you to benefit considerably from the economic advantages of digital printing!

The decor industry has already started to discover the benefits of digital printing and the advantages are obvious: décor changes that can be made at the touch of a button, and long and expensive set-up times are reduced to a minimum.

When producing décor, colors must match exactly, on every production line, on every material, in every (re-)run. ColorGATE equips you with the tools for design, color management and production of consistently digitally printed décor!

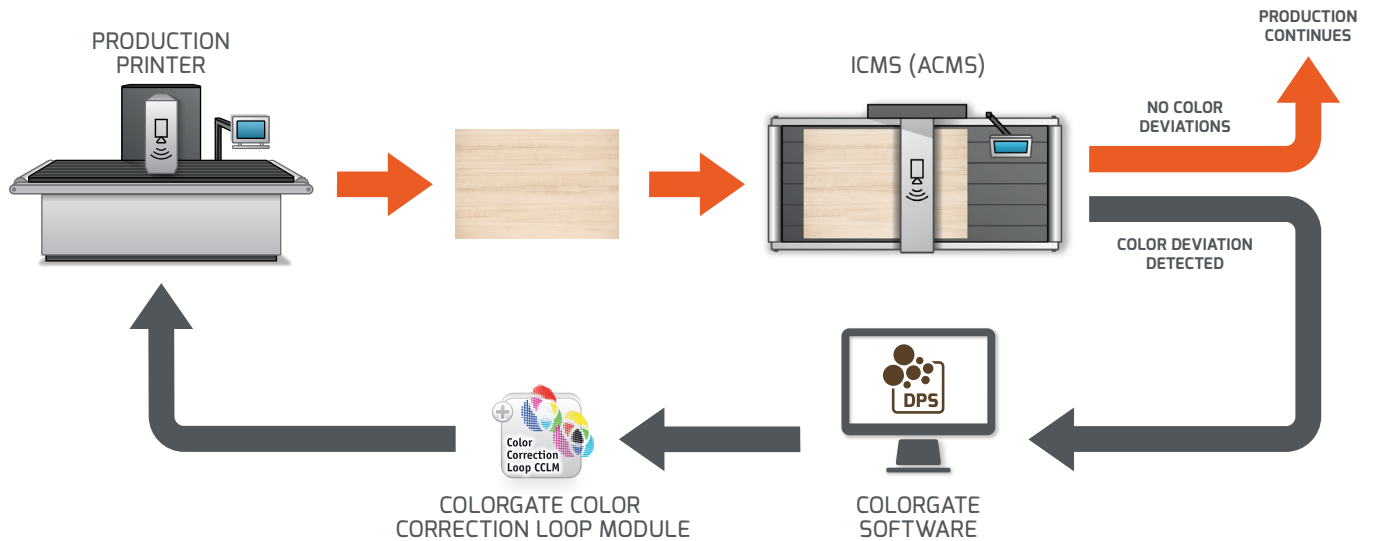

Our main product, **Décor Productionserver**, is your central print data and color management solution. With the high-tech scanner **Surf 3D**, you can capture and digitize analogue samples and templates or just gain inspiration from all kinds of surface patterns. Combined with our **industry know-how**, we'll take your printing workflow to the next level!

Highlights:

- Get color right in three dimensions: accuracy, consistency and composition!
- Process large files in practically no time
- Get matching output at any time, even with different devices, production lines or at different locations
- Iterative color correction during the ongoing production
- Archive your data for fast and color-accurate re-runs
- Automate the creation of digital print data
- Fingerprint Module: create a digital color twin
- Ink Saver technology: save ink, increase your process stability and reduce drying times
- Amazing design creations and fast measuring with Surf 3D

DESIGN	COLOR MANAGEMENT	PRODUCTION
<ul style="list-style-type: none"> - Digitize color, structure and glossiness to create amazing designs - Scan and measure existing designs - Predict the actual color impression of your design - Test your design immediately without having to interrupt ongoing production 	<ul style="list-style-type: none"> - Work with the actual color at every process stage - Fingerprint technology: archive your color for accurate results at any time - Minimize color deviations - Fast measurement and profiling according to industry standards 	<ul style="list-style-type: none"> - Objective monitoring of color output - Easy color correction without the need for another color management cycle - Ink Saver: same look, less ink! - Fast and color accurate re-runs
