New, improved quality and handling. ColorGATE puts Version 5.10 on the market

Flexible, reliable and quick production stands for perfection in digital printing services today. With that in mind, ColorGATE now offers technology that's already in the fifth generation: "The universal RIP solution for all applications". From centrally controlled high-end large format printing to proofing and film production and right on up to photo and fine art. Version 5.10 is now even more optimized in terms of quality and handling, with special offers for ColorGATE PRODUCTIONSERVER at your nearest retailer that are as fresh as a breath of spring.

New and very functional in the current Version 5.10: PRODUCTIONSERVER directly displays the difference value on the output profile selected in DeltaE for the lab color replacement. All that's needed is a look at the new dE column in the color table. In addition, the "enhanced quality (16bit)" function works in 5.10 with greater differentiation than before. Another key word is "improved white ink support": Some printers support special colors for "suppress white", paint application or spot color replacements. These functions are now available for many Mimaki printers, Roland XC-540, etc. New additions to the list of printer drivers supplied also include Acuity HD 2504, HP-DesignJet-T6100/H35x00 and Mutoh DrafStation Pro/Viper TX (For the complete list, go to: www.colorgate.com).

ColorGATE PROOFGATE technology users will be happy to discover the expanded report function in the control wedge evaluation. Starting immediately, the simplified report makes evaluations on the DYMO LabelWriter possible. In addition, the automatic measuring of reflective and transmissive targets with the Barbieri Spectro LFP RT spectral photometer for the high-quality profiling of papers, backlit and textiles is now also optionally available.

Depending on your requirements, there are four different versions of PRODUCTIONSERVER 5.10 to choose from: ULTIMATE (fully equipped version incl. PROFILER and EXPRESS PROFILER Module for 4 printing systems), PRO, SELECT (basic version) as well as economically priced "Special Editions" for the HP Designjet 8000, the Mutoh Valuejet, the Roland, etc. (Maximum color consistency after an upgrade from Version 4 to 5.10 is guaranteed. All MIM combinations can be taken over.)

Order now, and PRODUCTIONSERVER 5.10 is double the value. Up until the end of May, ColorGATE retailers are offering special conditions: 2 optional additional functions for free at a cash value savings of up to € 800/license. In addition, PRODUCTIONSERVER 5.10 ULTIMATE is also available as an attractive bundle with the Eye-One Design spectral photometer (For more information, go to <http://www.colorgate.com/colorgate.rip/de/produkte/promotion/spring/>).
