

Press release - May/June, 2008

**ColorGATE live at drupa 2008.  
Presenting PRODUCTIONSERVER<sup>5</sup> as the best certified  
RIP solution in the HP compatibility test**

Three stars six times over, which means the best marks in all the disciplines; that was certainly a first in the HP Designjet compatibility test for third-party RIP solutions. And it was the ColorGATE PRODUCTIONSERVER that accomplished this amazing feat. At drupa 2008 in Düsseldorf - HP Booth, Hall 8a/B26 - ColorGATE will present its universal RIP champion live, with all of its impressive features, in combination with the HP Designjet Z6100.

The compatibility criteria for the unique HP certification program covers printing performance, the use of the integrated spectro photometer, support of HP media for printing quality, reports on printer status, printing job registration and printing job cancellation. The first and only production RIP solution that scored top points in all the certification categories: ColorGATE PRODUCTIONSERVER<sup>5</sup>.

Now the ColorGATE flagship bears the "Certified for HP Z6100" seal of approval as the best offer currently available in this market segment. ColorGATE Managing Director Thomas Kirschner commented: "We are firmly convinced that an HP Designjet Z6100 plus ColorGATE PRODUCTIONSERVER<sup>5</sup> currently represents the most universal, water-based large-format printing system to cover all types of high-quality LFP orders and give you the best value for your money."

And there's more. The PRODUCTIONSERVER Update 5.11 presented at drupa 2008 features a very special, brand-new highlight for the HP-Z series (6100, 3100, 2100): HP Professional PANTONE Emulation. The certified HP development calculates color replacement tables for a specified ICC profile, making it possible to simulate PANTONE spot colors with greater accuracy than ever before. And the outstanding results achieved in actual practice - can be seen live in Hall 8a, Booth B26.

By the way: HP will be presenting HP Latex large-format printing technology with new printing systems at drupa 2008. ColorGATE has developed a production RIP for the future HP system solution, the HP Latex Ink Printer HPL65500. The driver is already available in the ColorGATE printer driver category II.
